

The construction of rooms under RUSA would help us in providing classrooms. At present there is an acute lack of classrooms and many classes are taken by teachers in open. Without classrooms we have to suffer heat and cold in open. At the same time the lack of board makes it difficult for us to understand lectures. With the new classrooms available to us we would be given better instructions by teachers and it would make teaching more comprehensible to us. Four additional classrooms which are being constructed would help us greatly and benefit students in a great measure.
